

Anti-Conjugated Carnosine

Product Information Sheet
1059GE

SUMMARY

shipped on blue ice; store at -20 °C

For research use only.

Not for use in diagnostic or therapeutic procedures.

Description

Polyclonal antisera were raised in rabbits after immunization with the conjugates: Carnosine-glutaraldehyde-carriers.

Contents: The antibody is supplied in a unit size of 50 µl in PBS with 50% glycerol.

Storage and Handling

When this product is stored undiluted at -20 °C or lower, it is stable for at least 2 years. Multiple freezing and thawing is only possible up to 5 times. The antibodies can be prediluted 10x in PBS containing 0.1% merthiolate or a mixture of PBS/glycerol (1:1, vol./vol.). At 4 °C these solutions are stable for 2 months.

Specificity

Using a conjugate Carnosine-glutaraldehyde protein, antibody specificity was determined in an ELISA test by competition experiments with the following compounds:

Compound	Cross-reactivity ratio ^(a)
Carnosine-G-BSA	1
Histidine-G-BSA	1:50,000

(a): Carnosine-G-BSA concentration / concentration of unconjugated or conjugated polyamine at half displacement;

G = Glutaraldehyde, BSA = Bovine Serum Albumine

Recommended dilution

The anti-conjugated Carnosine antibodies can be diluted 1:2,000 to 1:10,000.
